gPanel by promevo

gPanel Standard vs. Enterprise

gPanel is a powerful administrative tool created by Promevo, designed to simplify Google Workspace management and reporting.

Most gPanel users subscribe to either the Standard or the Enterprise version of the platform. Each of these tiers offers a robust feature set at different price points to help you meet your organizational goals.

What Is gPanel Standard?

gPanel Standard provides up to 70 unique reports to give Google Workspace admins access to the insights they need to effectively manage their domain. This tier allows you to **manage many aspects of your Workspace environment** including users, permissions, Drive, emails, passwords, and more.

While this tier **does not include the gPanel API or advanced reporting**, it still goes above and beyond what's accessible in the Google Admin Console to enhance efficiency, security, and control over your data and reduce administrative errors.

What Is gPanel Enterprise?

gPanel Enterprise takes the functionality of Google Admin Console and all other gPanel tiers to the next level.

It includes all the features of the Standard tier, plus an **Enterprise-exclusive Rules Engine and API** that allows admins to create "if, then" style automations, access system logs, and seamlessly integrate with other third-party applications like **CRM, HRIS, and ERP systems**.

gPanel Enterprise also includes **advanced reporting capabilities** that allow you to generate reports spanning a user's entire lifecycle — well beyond the six-month report in Admin Console.
