

Promevo is leveraging our strategic partnership network to offer **CloudM's Backup and Archive**. These two robust solutions help us give our clients even more tools to protect their sensitive company data and enhance their Google Workspace environments.

CloudM Backup and Archive provides comprehensive data protection for organizations using Google Workspace. When both tools are used together, organizations gain better control over their data while reducing storage costs and avoiding vendor lock-in.

## CloudM Backup

CloudM Backup is a robust data sync tool that allows you to schedule backups in customizable intervals of up to 20 minutes, so you can ensure your company's information is always secure. It also allows you to create custom backup policies and restore data on both bulk and granular levels.

CloudM Backup leverages your cloud infrastructure, so there's no vendor lock-in. Plus, the platform only syncs new and updated files, making it faster, more reliable and less resource-intensive than other data syncing solutions.

## CloudM Archive

CloudM Archive helps you retain ex-employee data, securely storing their information within your Google Cloud Platform (GCP) storage bucket or another form of cloud storage.

This solution helps keep your business compliant with regulatory requirements like HIPAA while also helping you save on Workspace subscription costs by automatically removing or reassigning licenses from offboarded users.

CloudM Archive allows you to automate your retention policies and license reassignment.
