Discussion Questions

- Hype tells us that people should be salivating over AI tools right? So why are we talking about driving adoption?
- Why does it matter if they use it?
- How is AI different than deploying other tools?
- Is there a gap between reality and expectations of what AI can do?
- Is there a correlation between certain departments and high adoption, and other departments that don't catch on?
- What works in getting people engaged and excited?
- What about super slow adopters? People who still aren't getting into it even after a workshop.
- In terms of AI functions for specific tools like Google Docs, Drive, etc vs an open-ended chat-style AI, does one drive engagement more than the other?
- Is it acceptable, or even possible, to block employee access to other Gen AI tools?
- Employees are often asked to avoid exposing AI tools to sensitive data – how do they go about that? Is that a legitimate risk in a closed AI environment?
- What abilities does an admin have to monitor usage? Is it possible?
